Subject: rule change

Pete: Thank you for the follow upon the rule change proposal. Both I and Bill Beckley reviewed the proposal and found it to be well written and encompassing substantial scientific reference to support the choices that you've made in the application of the TEF/TEQ methodology we agreed with the use of the 2005 WHO tables. We were also happy to see the clarification on the methodology for PAH's and PCB's. So please continue the enactment process and correct the rules so polluters have to clean these chemicals appropriately. Again good work.

Larry Dunn

Subject: PBDE's

Pete: Are you looking at PBDE's in MTCA? I am aware of a current body of evidence indicating their wide dispersion in the environment and understand that they are similar in effect and in environmental persistence to PCB's. I believe WHO is currently addressing them in their literature. Larry
